

Two proposed updates about the DRPS of computational complexity (INFR11102):

<http://www.drps.ed.ac.uk/17-18/dpt/cxinfr11102.htm>

- I want to update the Course description to reflect more active research topics nowadays. Specifically, I want to change "The polynomial hierarchy and alternations" into "The polynomial hierarchy", and "Hardness of approximation and the PCP theorem" into "Counting complexity".

- Change from 3 exercises to 2. This is to be in line with other UG4 courses. I was told that a couple of years ago it was determined that the load of UG4 courses should be reduced, but cmc was not delivered in the past two years, so the DRPS is out of date.

Specifically, I want to change "Three collections of pencil-and-paper exercises issued at approximately three-week intervals." into "Two collections of pencil-and-paper exercises issued at approximately four-week intervals."
