

INFR11141 – the Human Factor: Working With Users

Response to student feedback in 2018/19 course survey

We have taken note of the feedback from students in this course survey, and have the following comments in response. Many thanks for those who provide constructive suggestions for improving the quality of teaching. Summarised responses as follows

- Next year, I will run a separate visualization course spanning the whole semester with the double amount of face-time hours. The course will include more tutorials, asking for tutorial preparation, and will include mid-term feedback
- Next year, the THF course will no longer be split into Human Factors and Visualisation, since there will be a separate Visualisation course. We encourage students to take this course if they wish to learn about data visualisation. Following mid semester student feedback, The Human Factor will focus more on accessibility and on exploring the psychological theories behind perception and cognition. There will also be scope for one student directed week.
