Teaching Committee

8 November 2017

School Strategy and Plan 2018-21 – Learning, Teaching and Student Experience

Author

Martin J Wright, Director of Professional Services

Background

The School is required to annually review and refresh the School Plan for submission to College. The plan identifies the School priorities across its areas of activity, including learning, teaching and student experience, over a three to five year planning horizon.

Action requested from the committee

Note process, review current plan content and advise Director of Teaching of any suggested updates or amendments.

Main subject text

The School is required to submit its revised plan by the end of the calendar year. The plan includes detailed financial projections for the next three years and highlights the priorities and activities to which those financial projections relate. It also takes a longer term view of the operating environment and how that may impact upon the School and its activities.

No major change is anticipated to the current (2017-20) School Plan, however there will be a need to update progress on actions identified in the plan and to address any more recently identified issues. Amongst the latter will be the School's approach to various distance learning initiatives including the University's Distance Learning at Scale proposals.

The 2017-20 School Plan may be found at:

http://web.inf.ed.ac.uk/sites/default/files/atoms/files/school_of_informatics_strategy_and_plan_2017-20.pdf

The sections relating to learning, teaching and student experience may be found on pages 3 (strategy), 19-23 (learning, teaching and student experience).

Equality and diversity implications – none specific.

Resource implications (staff, space, budget) – the School Plan will inform allocation of resources over the planning period.
