

Parallel Programming Languages and Systems (PPLS)

Response to student feedback in 2018/19 course survey

Thanks for the feedback everyone, my response is as follows

- I will think about whether more, or different, coursework would be appropriate.
- As ever, I will try to speak consistently louder!
- Regarding "more hands-on", as I commented previously, I really do encourage you to play with the languages/libraries for your own fun and education. You can run Pthreads, Java and MPI programs on DICE, and since many lab DICE machines now have four cores, you can try to get some real speed-up, on simple problems.

Murray Cole, May 2019
