

# Software Design and Modelling (SDM)

Response to student feedback in 2022/23 course survey

I have taken note of the feedback from students in this course survey, and have the following comments in response.

- To note: only a few (two?) students commented so the comments may not be representative.
- The advice to prepare well and early for the "midterm" (the lab assessment that takes place in Week 6), and to keep up with the reading, which is examinable, is *very good advice*. I think, and hope, that this course can be a relatively low-stress one, but it does require students to be well organised as there are many elements to keep up with, including quite a lot of reading.
- I will be making a skills video about OCL for next year.
- To note: next year the old Learn system is being retired. Next year's web presence will be... different.
- I wish we could have small tutor-led groups in this course, but unfortunately this is impossible because of the lack of available tutors.
