Computer Science MSc Program

"Spans the range from computer architecture through theoretical computer science."

Computer Systems
HPC, IoT, Architectures

Databases and Data Management

Software Engineering

Cyber Security and Privacy

Quantum Informatics

**Theoretical
Computer Science**

“Spans the range from computer architecture through theoretical computer science.”

Computer Systems
HPC, IoT, Architectures

- Theory and the practice of designing, optimising and programming computer systems
- Parallel Architectures
- Internet of Things (IoT)
- High Performance Computation (HPC)

“Spans the range from computer architecture through theoretical computer science.”

**Cyber Security
and
Privacy**

- Cyber Security: Protecting computers and their data against malicious or accidental damage.
- Cyber Privacy: limiting personal information and protecting it from abuse, even when data is shared.
- Security of Internet of Things
- Blockchain

“Spans the range from computer architecture through theoretical computer science.”

**Databases
and
Data Management**

- Algorithms for dealing with big data
 - Databases
 - Data management
- Theoretical analysis of database systems
 - Data structures
- Practical approaches for dealing with distributed data

“Spans the range from computer architecture through theoretical computer science.”

Markus Spiske

Software Engineering

- Usability and design
- Security
- Performance optimization
- Software quality control:
 - Testing and formal verification
 - Data management
- Software management

“Spans the range from computer architecture through theoretical computer science.”

Quantum Informatics

Exploiting quantum effects to manipulate information in novel ways.

- Introduction to Quantum computing
- Quantum Cyber Security
- Categories and Quantum Informatics
- Quantum Information Theory (Physics)

“Spans the range from computer architecture through theoretical computer science.”

Theoretical Computer Science (TCS) is the use of mathematical thinking and techniques to understand computer science.

- What is Computation?
- Design of new Algorithms.
- How can we know whether our algorithm is the fastest
- Computation Complexity
- Algorithmic Game Theory

**Theoretical
Computer Science**

Computer Science MSc (180 credits)

Mandatory courses (80 credits)

Informatics Research Review (IRR, S1, 10 credits)

Informatics Project Proposal (IPP, S2, 10 credits)

MSc Dissertation (Summer 60 credits)

Computer Science Foundations (60-100 credits)

Other courses (40 credits)

1. Computer Science Foundations, Systems and Software
2. Programming
3. Other topics from School of Informatics
4. Other Schools at University of Edinburgh
5. Entrepreneurship

1. Would benefit from taking one of these courses to improve your **programming** skills?
2. Up to 20 credits for most degrees level 10 courses (third year and fourth year undergraduates).
3. Up to 20 credits in other Schools.

Selection deadlines

September 2022 entry is now open for applications. The selection deadline will be 31st March 2022.

Our MSc programmes

| | |
|---|--|
| Advanced Technology for Financial Computing MSc | This programme will provide you with a critical and practical appreciation of how data, computing and artificial intelligence technologies can be used and developed to deliver value in organisations with finance, risk and decision-making related digitalisation from both technology and business perspectives. |
| Artificial Intelligence MSc | AI research is interdisciplinary by nature and draws on neuroscience, cognitive science, linguistics, computer science, mathematics and statistics, psychology. |
| Cognitive Science MSc | Cognitive Science investigates human cognitive functions such as perception and action, memory and learning, language and communication, reasoning and problem-solving. |
| Computer Science MSc | The scope of Computer Science ranges from the design of programming languages and algorithms to models of computation, such as distributed, parallel and quantum computing, and the study of the limits of computation. We also offer specialist area courses in computer security. |
| Cyber Security, Privacy and Trust MSc | Cyber security and privacy is the study of the computational principles, methods and mechanisms for safe-guarding these sensitive applications. Graduates of the programme will learn how to evaluate, design, and implement secure and trustworthy systems in complex distributed systems. |
| Data Science MSc | Data science is the study of the computational principles, methods, and systems for extracting knowledge from data. Large data sets are now generated by almost every activity in science, society, and commerce. |
| Design Informatics MSc | Students are given an understanding of how to build computational systems as well as being taught the relevant principles of design thinking and making. |
| Advanced Design Informatics MSc | Students are given an advanced understanding of how to build computational systems as well as being taught the relevant principles of design thinking and making - Two-year programme. |

Programme description

Edinburgh's expertise in core computer science is recognised internationally, and spans the range from computer architecture through theoretical computer science.

This MSc offers you the opportunity to obtain specialist knowledge in the design, analysis, implementation, and use of computer systems ranging from the components of a single processor to computer networks as vast as the Internet.

You can also pursue a more theoretical direction by choosing courses in areas such as:

- algorithms
- programming languages
- cryptography
- quantum informatics

The programme provides a solid foundation in theoretical understanding and a wide variety of practical techniques applicable in many career settings.

Programme structure

Jump to: [Year 1](#)

Year 1 Academic year: 2021/22, Starting in: September

NOTES:

Before making your course choices, make sure you have discussed them with your Personal Tutor.

Compulsory courses

You must take these courses

MSc Dissertation (Informatics)

Must be passed at 50%

INFR11077

60 credits

Informatics Research Review

INFR11136

10 credits

Informatics Project Proposal

INFR11147

10 credits

Course options

Group A

Select exactly 100 credits in this group.

Informatics MSc FSS Courses

Select between 60 and 100 credits of the following courses

When Computer Science MSc?

“Spans the range from computer architecture through theoretical computer science.”

- Interest in:
 - Computer systems
 - Software Engineering
 - Theoretical Computer Science

When Computer Science MSc?

“Spans the range from computer architecture through theoretical computer science.”

- Interest in:
 - Computer systems
 - Software Engineering
 - Theoretical Computer Science
- You want a broad perspective
- You may not know yet exactly which niche fits you best
