

# Informatics 1 - Object Oriented Programming (INF1-OP)

Response to student feedback in 2017/18 course survey

I/We have taken note of the feedback from students in this course survey, and have the following comments in response:

- An additional lecture per week has been added to relax the pace and include some practical demonstrations of best practices in regard to programming.
- An introductory branch for imperative programming has been added to the end of the first semester course Inf1A to boost beginner programmers and start a bit further down the line in the OP course.
- I absolutely agree that you need much more programming practice than what is covered in this course to become even a decent programmer. Please consider initiatives such as the Programming Club to further improve your skills.
