SCHOOL OF INFORMATICS

Strategy Committee

26th April 2017

School contribution to the University's IoT programme

Ewan Klein

Background –

Aligned to the Digital Research Services programme, Information Services and Informatics have been leading an **Internet of Things** (IoT) initiative. This will enable us to capture real-time data from a large number of sensors (both mobile and static) across the campus and the city as a whole. This initiative will underpin future activity aligned to both the City Deal and to future commercial partnerships. **This programme is a key delivery vector for the CityDeal programme.**

Action requested from the committee

Official confirmation that the School agrees to be named as one of the primary contributors to the University's IoT Programme.

Equality and diversity implications – Y/N Provide details. **None.**

Resource implications (staff, space, budget) – Y/N Provide details. **TBC**
